Subject Index

A

Accommodation 244
Acetate 52
Acetylcholine-evoked membrane potential 465
Acetylcholine-sensitivity 88
Acid-base change 94
Acidification 211
Actin myosin interaction 83
Action potential 88, 248
– potentials 121, 345
Activation energy 109
Acyl-CoA 317
Acyl carnitine 317
ADH target epithelia 211
ADP 330
Adenosine 244, 376
Adenylate cyclase activation 116
Adipose tissue 325
Adrenalectomized rabbit 258
– rats 48
Adrenalectomy 258
Adrenal steroids 48
Aequorin 345
Aerobic metabolism 306
Afferent C-fibres 454
Afterhyperpolarization 244
Age-dependent changes 100
L-Alanine 176
Aldosterone 48, 258
Alkalinization 211
Alkaloid-modified channels 439
Alternating current spectroscopy 409, 421
Alveolar partial pressures of CO_2 and O_2 312
Amiloride 42, 272
Amino acids 176
Amylase secretion 176
Anion exchange 258
Anionic channel 281
Anions 353
Anti-AVP 360
Antidiuretic effect of vasopressin 360
– hormone 166, 171, 211, 458
Aorta-caval fistula 317
Apamin 222
Apical cell membrane 421
Arrhythmia 76
Arsenate 258
ATP content of cortical slices 116
Atrioventricular (A-V) node 248
Awake monkey 292

B

Ba^{2+} 364
Ba-sensitive current 446
Ballistocardiac 76
Barium-induced blockade 446
Basolateral substrate uptake 52
Benzocaine action 439
Bicarbonate 258
Birth 100
Blood flow 306, 325
– pressure 341
Brainstem oscillators 10
Brattleboro rats 458
Breathing pattern 150
– rhythm generation 10
8-Bromo-cyclic AMP 211
Brown adipose tissue 325, 402

C

C-fibres 454
^{45}Ca efflux 176
Ca^{2+}-dependent K^+ permeability 222
Ca^{2+}-selective microelectrodes 1
Ca-inflow 235
Ca-ionophore (A-23187) 330
Calcium 1, 171, 244, 458
Calcium concentration, plasma 341
– entry blockade 341
– ionophore 166
– permeability 465
– sensitivity of contractile element 345
– uptake by platelets 330
Calmodulin 166
cAMP 42
– concentration 216
– production 116
cAMP-dependent protein kinase 216
Cardiac active Na transport 109
– contractility 216
– pacemaker cell 248
– Purkinje fibre 1
– response to overload 216
– tissue 1
Carnitine 317
Cations 353
Cell pH 300
– water permeability 337
Cellular buffering power 300
– pH 211
Cerebellar feedback signals 292
Cervical cord 10
Channel blockers 446
Chemoreflex drive 162
Chloramine-T 439
Cholinergic synaptic activation 94
Cis-to-trans tracer fluxes 197
Citrate synthetase 306
Cl^- conductance 63
Cl^--conductance 376
Cl-transport, trachea 42
Clearance studies 34
Climbing fibre 292
Cloride flux 207
CO_2 pressure 300
Cold 402
– block technique 10
– exposure 157
– shivering 144
Cold-sensitive mechanoreceptors 454
Collagen 330
Collagenase 248
Concentration of urine 385, 393
Conductance 281
Connectivity of respiratory neurones 129
Contraction kinetics 83
Contraluminal cell membrane 258
Cooling contracture 345
Cooperativity 197
Cortical collecting tubule 48
– thick ascending limb 52
Cortico-steroids 258
Corticosterone 48
Cotransport 39
Countercurrent systems 385, 393
Cross adaption 402
Cross-bridge 137
Current density 248
Current-voltage relationship 248
α-Cyano-m-OH-cinnamat 52
Cyclic AMP 166, 376
Cytochalasin B 52
Cytoplasmic buffering power 300

D

Decerebration 10
Denervation 88
9-Deoxo-16,16-dimethyl-9-methylene-PGE_2(9-methylene-PG_2) 360
Dexamethasone 48
Diabetes insipidus 458
Diffusion of chloride ions in mucus 207
Digitalis glycosides 100
– sensitivity 100
Dihydroouabain (DHO) 109
Diluting segment of frog kidney 272
– potential 63
Dimethyl-oxazolidine-dion 211
Diuretic effect 360
Divalent cations 465
Dogfish 63, 376
Double-barrelled pH microelectrodes 300
Doxapram 10
Duodenal muscularis 454
Duodenum 454

E

E-C coupling 321
Early facilitation 225
ECF [HCO_3^- 94
Electrical constants in nodal cells 248
Endotoxin/endogenous pyrogen 157
Endplate 225, 235
Enflurance 345
Enzyme activities 306
Epinephrine 42
Episthelia, leacky 337
Epithelial impedance analysis 409, 421
– transport 258
Epithelium 42, 211
Erythrocyte ghosts 197
Excitation-contraction coupling 345
Exercise in ducks 162
Experimental Fanconi syndrome 116
Expiratory discharge rate 150

Extracellular K concentration 109
Extrasystole 321

F
Facilitation 225
Fanconi syndrome 116
Fast skeletal muscles 306
Fatty acid metabolism 317
Fever 157
Formate 258
Forskolin 376
Fourier transform techniques 409
Frequency-dependent voltage divider ratio 409
Frog muscle 185
– node of Ranvier 353
– skin 166, 211
Fructose-1,6-diphosphatase 306
Fuel uptake 306
Furosemide 272, 364, 376
Fusimotor innervation 144

G
Gallbladder epithelium 421
Glomerular filtration rate 34
Glucocorticoid 258
D-Glucose 52
Glycoproteins 157
β-Guanidinopropionate 185

H
H^+ transport 272
^3H ouabain binding 258
Hand movement 292
HCO_3^- transport 300
Heart 248
–, isolated 317
– rate 76
Heat exposure 157
Henle's loop 385, 393
Hereditary hypothalamic diabetes insipidus 458
Hering-Breuer reflex 129
Hexokinase 306
High frequency ventilation 150
Hill coefficient 63
– coefficients 197
Hippocampal pyramidal cells 244
Histamine antagonists 325
Hydralazine 341
Hydrogen 171
– ion transport 272
3-Hydroxyacyl-CoA dehydrogenase 306
Hypercalcaemia 341
Hyperpolarizing pulses 235
Hypertension 330
Hyperventilation 312
Hypocapnia 312
Hypothalamic diabetes insipidus 458
– thermosensitivity 144
Hypothermia 10
Hypoxia 312

I
Impedance analysis 409
in vitro microperfusion technique 385
Inappropriate antidiuretic hormone release 360
Indomethacin 42
Inorganic sulfate 433
Inspiratory beta neurones 129
– discharge rate 150
Internephron heterogeneity 385
Interspecies differences 393
Intracellular Na^+ activity 39
– Na activity (a^i_{Na}) 109
– pH 211
Intraepithelial resistance barriers 409, 421
Inulin 34
Inward rectifier 446
Iodoacetate 185
Ion transport 42, 337
Ionophore A23187 465
Iontophoretic application of acetylcholine 88
Ischemia 317
Isolated frog skeletal muscle fibres 222
– intact skeletal muscle 137
– rat myocardium 321
Isolated-perfused kidney 272
Isolated working heart 317
Isometric twitch 185

J
Jaw muscles 76

K
K transport 393
K^+ adaptation 272
K^+ channels 18
K^+ conductance 63, 176
K^+ current 446
K^+ currents 190
K^+ permeability 222
K^+ permeability in plasma membrane 222
KIO_3 24
Kidney 34, 52, 258, 385, 433, 458
–, exp. Fanconi syndrome 116
–, Henle's loop 393
– microdissection 258
– proximal tubules 300
– tubule 337

L
L-Lactate 52
Lactate dehydrogenase 306
Lateral intercellular space resistance 421
Leaky epithelia 337
Length vibration 83
Lenght-tension relationship 321
Lipid intermediates 317
Local electrical activity 88
Low molecular weight protein (lysozyme) 34
Lysozyme reabsorption 34

M
Macrophages 281
Magnesium 458
Mandibular postural tremor 76
Marine teleost fish 207
Maturity 100
Mechanoreceptors 454
Meiotic maturation 39
Membrane current 109, 176, 248
– evaginations 18
– potential 39, 176, 330, 465
– surface 197
Menstrual cycle 312
3-O-Methylfluorescein phosphatase 100
Microdetermination of inorganic sulfate 433
Microelectrodes 1, 421
Microionophoretic ACh application 465
Mineralcorticoid 258
Molybdate 258
Monosynaptic connection 129
Motor control 76
– nerve terminals 225, 235
Multi-frequency superimposed sinewave burst 409
Muscle 100, 121, 137, 185, 190
– cells 18
– fibers 345
– length 321
– spindle 144
– tremor 76
Myelinated nerve fibre 24
– – fibers 353
Myoballs 18
Myoblasts 121
Myocardium 321
Myotube membranes 281
Myotubes 121

N
Na efflux, electrogenic fraction 109
Na inward current 24
Na pump 109
Na sensitive microelectrode 109
Na transport 393
Na-transport, trachea 42
Na^+ adapted animals 272
Na^+-alanine cotransport 39
Na^+ channels 121
Na^+ conductance 176
Na^+ currents 190
Na^+/H^+ exchange 272
Na^+ $2Cl^-K^+$-carrier 364
Na^+ $2Cl^-K^+$ carrier 376
Na^+ $2Cl^-$ K^- carrier 63
Na-alanine cotransport 39
NaCl secretion 63, 364, 376
Na-K-ATPase 48, 258
Na-K-ATPase activity 100
Na-permeability 385
Necturus gallbladder epithelium 421
Nephron 258
Nerve fibers 353
– fibre 24
– terminals 225
Neural control of respiration 129
– respiratory control 10
Neuromuscular activity 76
Neurons 190
Neurotrophic influences 121
Nifedipine 341

Nodes of Ranvier 24
Nonshivering thermogenesis 402
Noradrenalin-stimulated blood flow 325
Norepinephrine 10
Nuclei of the tractus solitarius 129

O

Obex of the medulla 10
Oesophagus 207
β-OH-butyrate 52
Oocytes of xenopus laevis 39
Osmolality plasma 458
Osmosis 171
Osmotic water permeability 337
Ouabain 364
– binding sites 100
Oxalate 258
2-Oxoglutarate 258
Oxygen consumption 306, 325
– deficiency 421

P

Pacemaker cells 248
Pancreas, superfused 465
– (exocrine) 176
Paraaminohippurate 258
Paracellular pathway 63
Parathormone 341
Parathyroid hormones 116
Passive movement 292
Patch clamp 18, 190
– – electrodes 248
Patch-clamp technique 281
Patch voltage clamp method 190
pCa-tension relation 345
Pekin ducks 162
pH microelectrodes 300
L-Phenylalanine 176
Phosphate 258
– fluxes, erythrocyte ghosts 197
– selfexchange 197
Phosphocreatine 185
Phosphofructokinase 306
Phospholipase C (*Clostridium perfringens*) 171
Phosphorylase activation 216
Phrenic discharge 10
Physiological stress 402
Platelets 330
Postextrasystolic potentiation 321
Potassium 244
– channel 18
– current 222
Preoptic temperature 144
Probenecid 52
Progesterone-induced hyperventilation 312
– maturation of oocytes 39
Prostaglandin 360
Prostaglandin-analogue 360
Prostaglandin E_2 454
– $F_{2\alpha}$ 454
Prostaglandins 42
Proximal tubule 258
PTH 116, 341
Pulmonary stretch receptor afferents 129
Purkinje cell 292
– fibres 1, 109, 446
Pyramidal cells 244
Pyruvate 52, 306

Q

Quantal transmitter release 225, 235

R

Rabbit heart 248
Ranvier nodes 439
Rat myocardium 321
^{86}Rb efflux 176
Rectal gland tubules 63, 364, 376
Red cell ghosts 197
Release of transmitter quanta 235
Renal Mg and Ca reabsorption 458
– medulla 385, 393
– metabolism 52
– protein reabsorption 34
– proximal tubule 300
– refractoriness to PTH 116
Resistance barriers 421
Respiratory effects 10
Resting muscle length 321

S

Sacroplasmic reticulum 345
Sarcomere 137
Saxitoxin 353
Scorpion toxin 24
Sea anemone toxin 24
Secretagogues 42
Sensory feedback 292
Serosal hypertonicity 171
Short circuit current 52
SITS 52, 300
Single-channel parameters 281
Sinoatrial (S-A) node 248
Skeletal muscle 1, 100, 121, 137, 345
– – fibers 222, 345
– muscles 306
Slow muscle fibres 88
Slowly adapting pulmonary stretch receptors 129
Smooth muscle 83
– – cells 18
SO_4 loading 433
Sodium activity 39
– channels 439
– current 39
– – inactivation 24
Sodium-potassium pumps 100
Spike triggered averaging 129
Spinal respiration 10
Spiny dogfish (Squalus acanthias) 364, 376
STX 353
Stimulated fast muscle 306
Stress 402
Stretch receptor activity 150
– reflex 76
– response 144
Strychnine 10
Substrate uptake 52
Subthreshold polarization of terminals 235
Succinate dehydrogenase 306
Sulfate fluxes, erythrocyte ghosts 197
–, microdetermination 433
– transport, renal 258
Superior cervical ganglion 94
Surface charge 353
– coats 18
Sympathectomy 216
Synaptic delay 235
– transmission 94, 225, 235
Synchronization of spindle activity 76

T

Temperature dependence 109
– regulation 157
Temperature-sensitive afferents 454
Tendon-muscle junction 137
Tension transient 137
Tetanus 345
Tetrodotoxin 121, 353
Theophylline 42
Thermogenesis 325, 402
Thiosulfate 258
Tight junction resistance 421
Tm_5O_4 433
Tonic activation 83
Trace metals 157
Tracheal epithelium 42
– smooth muscle 83
Transepithelial osmotic gradient 393
– voltage (Vt) 393
Transmitter release 225, 235
Transport in platelets 330
Treatmill running 162
Trifluoperazine 166
TTX 244, 353
Tubular cells 300
– reabsorption of magnesium and calcium 458
Tubule, cortical collecting 48

U

Urea permeability 385
Urinary bladder 211

V

Vagal discharge 10
Ventilation 150, 162
Ventilatory response to hypoxia 312
Ventricular muscle 1
Veratridine 439
Visceral tension receptors 454
Vitamin D_3 341
Voltage clamp 24, 109, 248, 353
Voltage-clamp 222
– studies 121
Voltage-dependent inactivation process 446
– kinetics (ionic channel) 281
Voltage-gates 281
Volume-overloaded rat hearts 317

W

Water diuresis 360
– permeability 211, 337, 385
– transport 166, 337

Y

Young's modulus 137
